

The soundscape-behaviour loop in public open space

A conceptual framework linking the acoustic environment, behaviour, and generations of measurement, with the 98-study evidence base mapped onto it. Blue paths: sound shapes behaviour. Orange paths: activity shapes sound.

Band shading = number of pooled effect sizes (k); * p < .05, ** p < .01. Text below each band = MMAT quality of the contributing studies.

All 3 walking-speed effects come from low-quality studies — excluding them leaves nothing to pool (k = 0).

Generations of behavioural measurement

Generations accumulate rather than replace one another: G3 rose from 4 studies (2010s) to 20 (2020s) while G1 and G2 also grew. 22 studies use two or more generations and are counted in each.

G1 54 studies	Self-report survey · recall	G2 42 studies	Systematic observation mapping · counts	G3 24 studies	Sensing & trajectory GPS · video · ML
